

## **To whom so ever concerned**

I have worked with Gerry Rigdon for about 4.5 years. I have interacted with him to exchange information about hardware design, root cause analysis of system level issues, system safety architecture discussions and general strategies for system level and module level test tools.

He was always been very helpful, very clear and accurate in his replies and has always wanted to understand the problem fully to suggest best solutions. His ability to design safety architectures in a system was very useful in our products. I admire his way of looking at a problem from a holistic perspective and not in an isolated way. This helps him to come out with solutions which will address not only the issues at hand but also will avoid future problems.

The results of his efforts in the area of test tools, service tools are in everyday use and are performing excellently. His knowledge and skills in software system design and programming are his strengths.

He will be an asset to any design team which is working in new, challenging and complex projects. I wish him all the best in all his future responsibilities.
