

**THE ELECTRON
MACHINE
CORPORATION**

CARL A. VOSSBERG, III
PRESIDENT

March 10, 1998

To Whom It May Concern:

It is my pleasure to recommend Gerald T. Rigdon. He has been employed here from February 1988 to March 1999 and has proven to be a personable individual with excellent work habits. Gerry is neat and has maintained a good professional relationship with his fellow employees.

Gerry's duties included designing, coding, debugging and testing of real-time software applications using INTEL 80386 processors. These are incorporated into our process control instruments used for industrial monitoring and control applications. Including density monitors using CCD technology, X-ray thickness gauges, polarimeters, profile monitors, etc.

His performance and productivity has been superior and he has willingly assumed additional responsibilities including his development of a Windows 95/NT local area network (LAN) for our accounting, manufacturing, and inventory control. He has also designed and has maintained our corporate website. He has developed software applications for the INTEL 8088 Processor and an 8051 Micro Controller as well as graphic support for LCD panels, button overlays, a PID controller, and a very unique touch screen interface system.

Should you have any questions, please call.

Sincerely,

THE ELECTRON MACHINE CORPORATION

Carl A. Vossberg III
